

Mobile Data Protection & Management

Make Mobile Work Easy & Secure - Reliable Protection For Corporate Data

Everything Secures In One App

Your employees have access to all their important data on the go. Email, Contacts, Calendar, Messenger, Notes, Tasks, Documents, Internet and Intranet can be used easily and securely in a protected area on the iOS or Android smartphone or tablet.

The Integrated Messenger

With the Messenger module your employees can communicate with each other securely and in compliance with regulations, whether in groups or one-to-one: start encrypted phone calls with or without video, send documents and images, share live locations and much more. All information remains where it belongs - in your hands.

Configuration And Rollout - Made Easy!

The Management Portal allows administrators to easily set security defaults, such as the length of passwords and remote reset of the app if the device is lost. The rollout of the app is fast and simple. Employees download the app from the Apple® App Store or Google PlayTM and log in with their credentials sent via email.

Benefits for Security and Compliance

- Data is encrypted at rest within the container on the mobile device as well as in transit.
- The secure container-technology allows COPE and BYOD models.
- Corporate and personal data are strictly separated on the same device (iOS or Android).
- Work regulation compliant on mobile devices.

Benefits for employees

- Easy access to corporate data using smartphones and tablets.
- Increased productivity on the go.
- Private usage of mobile devices without any restrictions.
- Communicate securely and easily via email and messenger.

Benefits for IT

- Full control over corporate information, without violating the privacy of employees.
- Easy configuration and rollout within the existing infrastructure.

Mobile Data Protection & Management

Controlled Access To Corporate Data

With our Gateway, employees have secure access to corporate data from their mobile device. The Gateway secures the connection to the corporate infrastructure. It automatically ensures that only verified users have access to corporate data. All hassle-free, no VPN infrastructure and VPN profiles on the mobile device necessary.

Bring Your Own Device (BYOD)

The container approach focuses on protecting information and data. Instead of controlling the device, you take care of the security of the data on the mobile device, whether it is private or provided by the company. And the privacy of your employees is protected.

Secure Email Communication

Employees can send and receive S/MIME encrypted emails. The sender of an email can be reliably identified by a unique signature. Within the app, all data is encrypted.

App Modules

- Notes (only with Exchange/Office365).
- Tasks (only with Exchange/Office365).
- Documents (create, edit and save files securely).
- Browser (secure access to intranet and web).
- Secure camera.
- Messenger (optional add-on module).

Compatibility

- App is available for iOS and Android.
- File access via WebDAV.
- Synchronization with Active Directory or LDAP.
- Support for Microsoft® Exchange and HCL Domino Traveler via ActiveSync.

Security

- Hybrid encryption with RSA-4096 and AES-256.
- Communication via TLS.
- Full S/MIME support.
